

SAN PABLO AVENUE DATA SET

Global data

<u>Movement</u>	<u>Saturation flow (vphgl)</u>
Through and right turns	1,700
Protected Left-Turns (LT)	1,600

Assumption 2. lost time per phase (sec): equal to the change interval.

Assumption 3. minimum phase lengths (green plus yellow times)

Protected LT phases: 7 sec; Through phases: 12 sec

Calculate the minimum phase lengths for pedestrians:

$$G_{ped} = 5 + W/4.0$$

Where W is the roadway width (assume 12 ft travel lanes) – 6 ft
